Annual Subject Index: 1999

Algorithms

- alignment, sequence analysis 1
- computing reliability, distributed computing systems 129
- deviation, reverse engineering, recursion
- removal/introduction by formal transformation 650
- distributed, path-centres in tree networks 609
- distributed, specifying and implementing replicated objects 24
- division in residue number system, processing time 232
- $O(1)$ time, generation of combinatorial objects 400
- TANE, functional dependencies, databases 100
- vertical partitioning 39

Algorithmic probability

- measures, strings, Kolmogorov complexity 284
- probabilistic induction problems, unordered data 256

Approximate matching

- compression 1

Bandwidth

- reduction of wireless bandwidth consumption, distributed caching 455

Boolean structures

- Dijkstra/Scholten calculational logic, partial functions 73

Branches

- static branch prediction, source code level 142

Caching

- broadcast strategy reduction of wireless bandwidth consumption 455
- management, mobile computing 442

Calculus

- program design, integration with a subset of UML 82

Cilk

- efficient task scheduling 699

Compiler

- detecting error messages, exceptions, polymorphism, higher-order functions 360
- optimization approach, scheduling of computations and communications 373

Complexity

- computational, verification problems in process control specifications 349
- Kolmogorov and statistical, Bernoulli sequences 294
- Kolmogorov, complexity approximation principle, MDL and MML 318
- Kolmogorov, incompressibility method 287
- Kolmogorov, MDL, MML, discussion 338
- Kolmogorov, MML, discussion 327
- Kolmogorov, MML, rejoinder to discussion 343

- Kolmogorov, origins, ideas and applications, Turing machine 252

- MDL principle, MML, rejoinder to discussion 345

- minimum message length versus Kolmogorov, Turing machine 270

- MML versus Kolmogorov complexity, discussion 323

- statistical analysis, discussion 340

Compression

- approximate matching 1
- integers, fast file access 193

Concurrency control

- algorithms, performance analysis in mobile environments 511

Concurrent systems

- competitive and cooperative, structuring, fault tolerance techniques 627
- formal framework for information reuse 582

Data conflicts

- resolving, distributed real-time database systems, DDCR 674

Data retrieval

- fast file access, compression of integers 193

Databases

- distributed real-time, resolving executing-committing conflicts 674
- mobile computing, real-time data access requirements 501
- object-oriented, vertical partitioning algorithms 39
- user-generated transaction response times, approximation techniques 241

Design

- arithmetic logic units, RNS, VLSI design 232

Distributed systems

- imperfect nodes, reliability algorithms 129

Document exchange

- secure and fair, novel protocol 569

Error messages

- eliminating, tracking unavailable values 360

False drops

- optimization of signature file parameters, minimum response time 11

Fault diagnosis

- multipath networks, single and multiple fault detection 409

Fault tolerance

- techniques, structuring concurrent systems 627

Fault-tolerant programs

- reliable computing programs, RPC systems 592

- Heap
 - β , address scheme, global optimal values 391
- Hypergraphs
 - bypass channels, high-performance network candidate 62
- Hyperlinks
 - temporal behaviour, multimedia presentations 112
- Hypermeshes
 - performance merits of bypass channels 62
- Hypothesis testing
 - MDL principle, Bayes factor 260
- Incompressibility method
 - proof technique 287
- Information dispersal
 - optimization and efficiency of redistribution of secret shares 638
- Information retrieval
 - formal model for structured documents, evidential reasoning 547
- Information reuse
 - formal framework for concurrent systems 582
- Jape
 - proof calculator, interactive development of proofs 177
- k*-ary *n*-cubes
 - performance merits of bypass channels 62
- Key agreements
 - t-restricted, key predistribution scheme 51
- Location management
 - problems, cellular wireless networks 473
 - scheme for hybrid wireless ATM networks 487
- Logic
 - calculational, partial functions, fixed point rule 73
- Logic
 - formal, interactive development of proofs, Jape 177
- MDL principle
 - hypothesis selection and testing 260
 - MDL and MML coding 330
 - MML, algorithmic complexity 323
 - MML, algorithmic complexity, discussion 338
 - MML, algorithmic complexity, rejoinder to discussion 343, 345
 - MML, algorithmic complexity, Turing machine 270
- Method integration
 - subset of UML, program design calculus 82
- MML principle
 - Kolmogorov complexity, discussion 327
- Mobile computing
 - cache management, remote file system support 442
 - cellular wireless networks, location prediction strategies 473
 - concurrency control algorithms, performance analysis 511
 - database systems, real-time data access requirements 501
 - Digestor, Web page filtering and re-authoring 534
 - distributed location management, hybrid wireless ATM networks 487
 - multicast framework, dynamic route reconstructions 522
 - wireless environment, caching and broadcast strategy, reduction of wireless bandwidth consumption 455
- Modelling
 - business processes, object-oriented information engineering, Norm Analysis 221
 - semantic content oriented, COSMOS 153
- Multicast protocol
 - single logical ring and virtual token, reducing communication faults 202
- Multicasting
 - framework for mobile computing, dynamic route reconstructions 522
- Multimedia
 - semantic content modelling, COSMOS 153
- Multiprocessing
 - interactive development and testing system, RISC-style processor 422
- Networks
 - multicast protocol, reducing communication faults 202
 - availability evaluation of coteries, quorums 613
 - basic tree technique distributed algorithms 609
 - cellular wireless, location prediction and management 473
 - hybrid wireless ATM, distributed location management scheme 487
 - multipath, fault diagnosis, single and multiple fault detection 409
- Objects
 - replicated, specifying and implementing, non-blocking 24
- Partial functions
 - ability to handle with calculational logic, fixed point rule 73
- Partitioning
 - vertical, object-oriented databases 39
- Process control
 - specifications, verification problems 349
- Processor
 - RISC-style, interactive development and testing system 422

- Programming
 - predicative, program design calculus, subset of UML 82
- Proofs
 - interactive development, formal logics, Jape 177
- Proportional sampling strategy
 - random testing, E-measure, P-measure 693
- Quorums
 - availability evaluation of coteries in unreliable networks 613
- Recursion removal
 - algorithm deviation and reverse engineering, formal transformation 650
- Reduction technique
 - 1-to-1 redundancy diving strategy, optimal representative sets 430
- Remote procedure call
 - reliable computing, replication and transaction techniques 592
- Response time
 - optimization of signature file parameters, false drops 11
- Reverse engineering
 - recursion removal/introduction by formal transformation 650
- Scheduling
 - computations and communications, compiler optimization approach 373
- Secret sharing
 - optimization and efficiency of redistribution of shares 638
- Sequence analysis
 - compression and approximate matching 1
- Signature files
 - false drops, minimum response time 11
- Structured documents
 - formal model for retrieval and representation 547
- TANE
 - functional dependencies, databases 100
- Task scheduling
 - Cilk, efficient C-based run-time system 699
- Temporal behaviour
 - interactive, formal modelling 112
- Test suite
 - reduction strategy, finding optimal representative sets, 430
- Testing
 - and interactive development system, RISC-style processor 422
 - P-measure, E-measure, performance of different strategies 693
- Transaction management
 - RPC systems, reliable computing 592
- Transactions
 - user-generated, response times in databases, approximation techniques 241
- Tree traversal
 - generation of combinatorial objects, new $O(1)$ time algorithm 400
- Turing machine
 - probabilistic induction, unordered data 256
- UML
 - subset, integration with a program design calculus 82
- Verification
 - problems, process control specifications 349
- World Wide Web
 - page re-authoring, Digestor, mobile users 534
 - hyperlink temporal behaviour, multimedia presentations 112
